Senior backend and cloud engineer with 7+ years shipping production systems. Owns services end to end and raises the engineering bar through code reviews, CI/CD, and modern source control. Experience from legacy ERP rewrites to greenfield telehealth platforms, now focused on backend, cloud, and system design across .NET, Azure, Go, and AWS.

EXPERIENCE

Software Engineer, Carriage Services

Houston, TX May 2025 – Present

- Extracted 5 financial programs from a monolithic ERP and rewrote them as standalone services, cutting errors from 2–3 daily to ~1 per month.
- Built 4 CI/CD pipelines in Azure DevOps, cutting deploys from days down to minutes.
- Rewrote legacy financial processes to run on resilient API and SFTP integrations, replacing brittle FTP transfers and improvised scripts with more reliable cloud services.
- Moved a solution of 96 projects from TFSVC to Git, adding code reviews and branch policies. Critical production bugs dropped to nearly zero, and release testing fell from days to minutes.
- Authored specification documentation and system designs for new ERP modules, guiding implementation across the team.

Application Engineer, Spring Branch ISD

Houston, TX Feb 2024 – Oct 2024

- Built internal C#/.NET applications and tooling supporting the district's financial systems and staff efficiency.

Software Engineer II, Altron Inc

Manassas, VA Sept 2022 – Jan 2024

- Wrote a C++ forward logger that was 30–60% faster and handled 40–50% more throughput than existing solutions.
- Owned 8–12+ REST APIs pulling data from systems written in C++, Java, Python, Rust, and Bash.
- Standardized dev and deployment environments across the team with Docker.

Jr. Software Developer, Patient First

Glen Allen, VA Sept 2019 – Sept 2022

- Built a telehealth platform (Blazor, SQL Server, Azure) that recovered a third of the patient volume lost during COVID; still in production today.
- Migrated 3 apps to Azure, including the main patient health system, rebuilding the backend around APIs.

Software Development Intern, CoStar Group

Richmond, VA Aug 2018 – May 2019

- Built an automated website data extraction tool for the firm's data ingest.

SKILLS

Languages Go, C#, Python, JavaScript, TypeScript, Java, SQL, C++, Bash

Cloud & Infra AWS (Lambda, EC2, S3, ECS, RDS, IAM), Azure (Functions, App Services, DevOps), Terraform, CDK, Docker

Frameworks .NET Framework/Core, React.js, Node.js, Express.js, REST APIs, CI/CD, Git, Jenkins

Databases SQL Server, PostgreSQL, MySQL, MongoDB, DynamoDB, SQLite

EDUCATION

BSc Computer Science, Virginia Commonwealth University

Richmond, VA May 2019

Minor in Applied Mathematics

Award for Excellence in Design, 2019 VCU Capstone Design Expo
